

HSCN Supply Chain Guideline Toolkit Training

The Healthcare Supply Chain Network's (HSCN) mission is to establish and promote Canadian healthcare supply chain standards and leading practices. One of HSCN's objectives is to provide procurement professionals in Ontario healthcare organizations with the skills and competencies to implement supply chain leading practices and to manage public sector procurement activities in alignment with the Ontario Supply Chain Guideline (SCG).

As a result, HSCN has developed a Toolkit to assist healthcare organizations in implementing the SCG.

In the health sector, organizations including hospitals, Shared Service Organizations and Community Care Access Centres manage significant public funds in the procurement of goods and services. The SCG is a tool that can assist your organization to move forward on effective procurement and supply chain management.

You are invited to join HSCN for a Supply Chain Guideline Toolkit Training Session designed to:

- provide tools such as process maps, operating standards and templates to facilitate implementation
- assist you with SCG adoption

Date	Time	Location	Venue
